HOUSE IN THE WOOD CAMP

HOUSE IN THE WOOD CAMP

ACTIVITIES

Campers spend their days in activities including swimming, boating, nature lessons, outdoor skills, archery, team sports, arts and crafts, fishing, camping and more. We emphasize personal growth, responsibility, cooperation and social development.

GAINING SKILLS IN THE WATER TO DEVELOP SKILLS ON LAND!

Along with essential environmental immersion, our programs help students refine their essential life and social skills in a safe, outdoor environment. Activities like canoeing and kayaking build cooperation, team dynamics, communication skills and conflict resolution skills - all of which are highly valued in every stage of life.

SWIMMING & BOATING

95% OF CAMPERS will experience gains in independence, interest in exploration, and affinity for nature

REACHING NEW HEIGHTS

LEARNING FROM A WHOLE NEW LEVEL - IN THE TREES!

Recreational tree climbing, complete with ropes and harnesses, offers both adventure and experiential learning. It also gives climbers a more intimate and positive connection to nature and the environment. What campers accomplish during their time on rope, from learning the technique and tying the safety knots to climbing, is a result of hard work and perseverance. It challenges campers and instills faith in their own abilities.

EXPLORING ALL THE NATURE-FRIENDLY THINGS TO DO AND SEE IN THE VALERIE HALL OUTDOOR EDUCATION CENTER!

Campers discover a world of animals, geology, and conservation. Our STEM (Science, Technology, Engineering, and Math) curriculum translates into life skill development and real-world application. Bringing education outdoors, hands-on lessons foster a sense of environmental stewardship, as well as essential life and social skills from team dynamics to personal communication.

NATURE CENTER EXPLORATORIUM

Rowe students experienced gains in STEM skills after outdoor education: 3rd, 4th & 6th graders averaged 35% growth

CLOSE ENCOUNTERS WITH NATIVE ANIMALS

MEETING ANIMAL FRIENDS IN THEIR NATURAL HABITATS!

By observing firsthand, we can better understand the many interrelationships between plants and animals in the living laboratory of nature. Extensive nature lessons show campers a colorful variety of life. Hikes, bird watching, and experimenting teach students that what happens in the natural world affects them, just as they affect the natural world.

House In The Wood Camp helps children learn and develop healthy lifestyles in an inspiring outdoor environment.
